

## NOTES ON CONTRIBUTORS

**R. P. (Bob) Burn** is a Lecturer in Mathematics Education at the University of Exeter. He has published the problem sequences *A Pathway into Number Theory* (Cambridge, 1982) and *Groups: A Path to Geometry* (Cambridge, 1985) to cover undergraduate courses in interactive mode. Recently he has been searching for insights from the history of analysis to improve undergraduate instruction in that area. These are incorporated in *Numbers and Functions: Steps into Analysis* (Cambridge, 1992).

**Ronald Calinger** is located at The Catholic University of America. His article with G. Cavallar, entitled "Frederick the Great, 1712–1786," for Frank Thackeray and John Finding, Eds., *Statesmen Who Changed the World* (Greenwood), is in press. He is completing a historical introduction for Bernard Kolman and Robert Higgins' *Calculus* and is preparing *A History of Mathematics* for Macmillan.

**S. de Mora-Charles** est Docteur en Philosophie et Licenciée en Sciences Mathématiques, par l'Université Complutense de Madrid. Actuellement de Mora-Charles est professeur Titulaire d'Histoire de la Science à l'Université du Pays-Basque, San Sebastian; et a publié une édition de textes: *Los inicios de la teoria de la Probabilidad: Sigles XVI y XVII* (1988) et aussi *Ciencia y Apocalipsis* (1989), la fin du monde vue depuis l'Histoire de la Science. De Mora-Charles est membre de la direction de la Société Espagnole d'Histoire de la Science et la Technique et co-éditeur de la revue *Llull*.

**Gregg De Young** holds his Ph.D in the history of science. He is a member of the Science Department and teaches "Scientific Thinking," a course in the Core Curriculum Program at The American University in Cairo. His primary research areas are the Euclidean tradition in the Arabic/Islamic world and history of mathematics education in traditional Islamic societies.

**Günther H. Frei** received his Ph.D. in geometry from Zurich University in 1968 under the direction of B.L. van der Waerden. Since 1970 he has been Professor of Mathematics at Laval University, Quebec. His research is mainly on algebraic number theory and on the history of modern mathematics. In addition to many articles in these fields he has edited the correspondence between D. Hilbert and F. Klein.

**Catherine Goldstein** works in the CNRS at the University of Paris XI (Department of Mathematics). Her research concerns number theory and its history. Her publications include "Le métier des nombres aux XVIIème et XIXème siècles" [*Éléments d'histoire des sciences* (Serres, Ed), Bordas, 1989] and "Algebra in Zahlen-theorie von Fermat bis Lagrange" [*Geschichte der Algebra* (Scholz, Ed.), BI, 1990].
